

FreelanceFinder: Discovering Opportunities, Unlocking Potential

Team Id: LTVIP2025TMID55793

Team Leader : Komiripalepu Jagadeesh

Team member : Kokkiligadda Sandhya

Team member : Kolla Aditya

Team member :Kolapalli Gnana Pujitha

Introduction:

Welcome to FreelanceFinder, your dedicated platform for exploring freelancing opportunities and unlocking your full potential in the digital marketplace. Whether you're a budding freelancer looking for your first project or a seasoned expert seeking new challenges, FreelanceFinder connects talent with demand. Our platform is designed with a user-centric approach to empower individuals and businesses through seamless connections and transparent workflows.

Description:

FreelanceFinder isn't just a freelancing portal; it's a comprehensive ecosystem created to revolutionize the way freelancers and clients collaborate. The platform offers a wide array of professional opportunities across categories such as web development, content writing, graphic design, marketing, data science, and more.

Our intuitive interface ensures that users can easily create profiles, browse projects, submit proposals, and get hired quickly. With advanced search filters, recommendation algorithms, secure payment systems, and real-time communication tools, FreelanceFinder removes barriers and enhances productivity for both freelancers and clients.

Whether you're building your portfolio or sourcing top talent for your startup, FreelanceFinder offers the resources, tools, and support you need to thrive.

Scenario Based Case Study:

Meet Riya, an aspiring graphic designer.

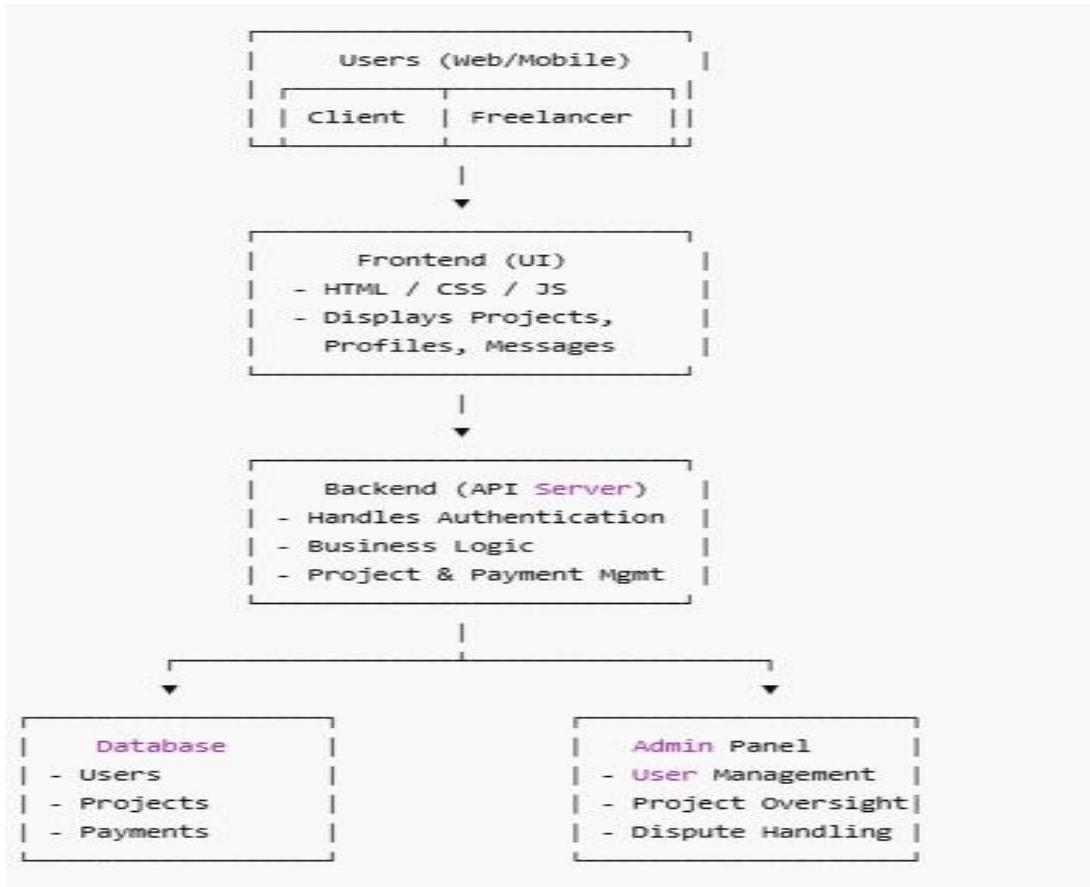

Riya is a creative graduate with a flair for visual storytelling but lacks industry connections to get started. She signs up on FreelanceFinder, completes her profile, and uploads her portfolio.

- **User Registration and Authentication:** Riya registers on the platform, verifies her identity, and sets up her professional profile.
- **Project Browsing:** She explores available gigs using category filters and tags to find designrelated projects.
- **Smart Suggestions:** Based on her skills and portfolio, FreelanceFinder recommends projects aligned with her interests.

- **Proposal Submission:** She sends customized proposals and eventually lands her first freelance gig designing a logo for a startup.
- **Secure Payments:** After completing the task, she receives payment securely through FreelanceFinder's escrow-based payment system.
- **Rating & Review:** Riya earns a 5-star rating and a positive review, helping her attract more clients.

Thanks to FreelanceFinder, Riya builds a sustainable freelance career doing what she loves, without worrying about delayed payments or finding clients.

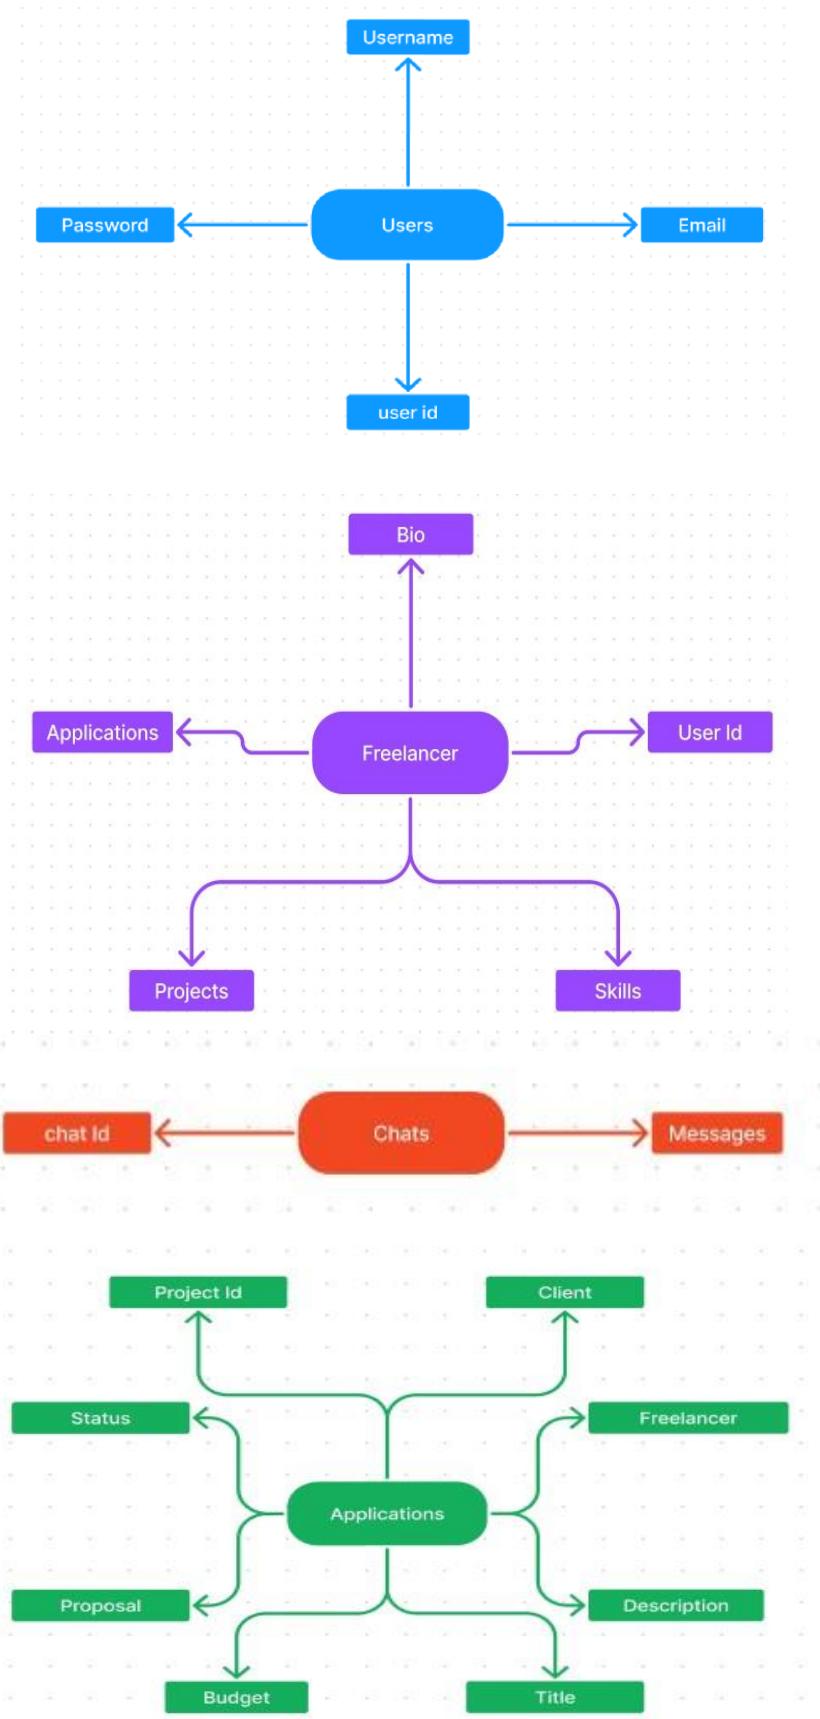

Technical Architecture:-

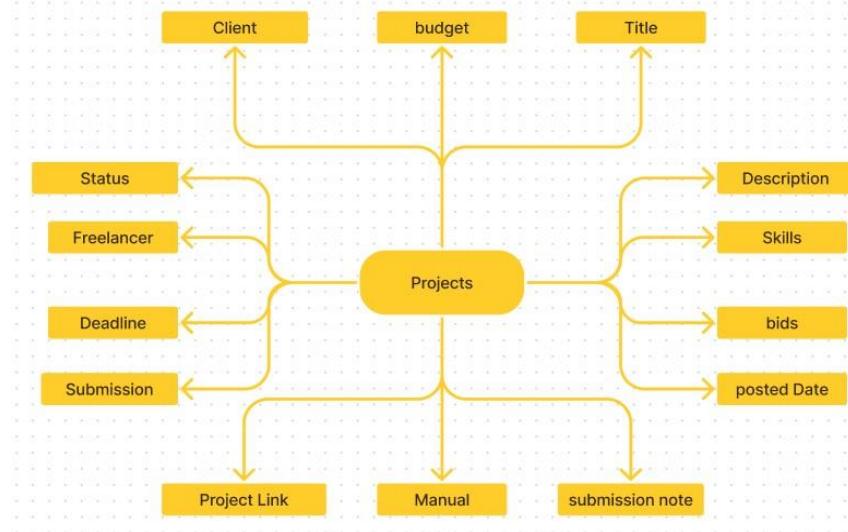

FreelanceFinder follows a modern web architecture based on the MERN stack (MongoDB, Express.js, React.js, Node.js).

- **Frontend:** Built using React.js for a dynamic and responsive user interface.
- **Backend:** Node.js and Express.js handle API logic, user authentication, and job management.
- **Database:** MongoDB stores user data, project listings, messages, and reviews.
- **Communication:** RESTful APIs connect frontend and backend, with WebSocket used for realtime messaging.
- **Security:** JWT-based authentication, encrypted password storage, and secure file uploads.

ER-Diagram:

ER-Diagram Overview:

- Users
- Freelancer
- Chats
- Applications
- Projects

Key Features:

- **Profile Management:** Freelancers and clients can customize and manage their profiles.
- **Project Listings:** Clients post projects with detailed requirements, budgets, and deadlines.
- **Smart Matching:** Recommendation engine matches freelancers to relevant jobs.
- **Secure Payments:** Escrow-based payment protection ensures freelancers get paid and clients get quality work.
- **Messaging System:** Real-time chat allows smooth communication and collaboration.
- **Dashboard Analytics:** Clients and freelancers get insights into earnings, performance, and proposals.
- **Admin Panel:** Allows platform moderators to manage users, content, disputes, and reports.

PREREQUISITES:

Here are the key prerequisites for developing a full-stack application using Express.js, MongoDB, React.js:

Node.js and npm:

Node.js is a powerful JavaScript runtime environment that allows you to run JavaScript code on the server-side. It provides a scalable and efficient platform for building network applications. Install Node.js and npm on your development machine, as they are required to run JavaScript on the server-side.

Download: <https://nodejs.org/en/download/>

Installation instructions: <https://nodejs.org/en/download/package-manager/>

Express.js:

Express.js is a fast and minimalist web application framework for Node.js. It simplifies the process of creating robust APIs and web applications, offering features like routing, middleware support, and modular architecture.

Install Express.js, a web application framework for Node.js, which handles server-side routing, middleware, and API development.

Installation: Open your command prompt or terminal and run the following command: **npm install express**

MongoDB:

MongoDB is a flexible and scalable NoSQL database that stores data in a JSON-like format. It provides high performance, horizontal scalability, and seamless integration with Node.js, making it ideal for handling large amounts of structured and unstructured data.

Set up a MongoDB database to store your application's data.

Download: <https://www.mongodb.com/try/download/community>

Installation instructions: <https://docs.mongodb.com/manual/installation/>

React.js:

React.js is a popular JavaScript library for building user interfaces. It enables developers to create interactive and reusable UI components, making it easier to build dynamic and responsive web applications.

Install React.js, a JavaScript library for building user interfaces.

Follow the installation guide: <https://reactjs.org/docs/create-a-new-react-app.html>

HTML, CSS, and JavaScript: Basic knowledge of HTML for creating the structure of your app, CSS for styling, and JavaScript for client-side interactivity is essential.

Database Connectivity: Use a MongoDB driver or an Object-Document Mapping (ODM) library like Mongoose to connect your Express Js server with the MongoDB database and perform CRUD (Create, Read, Update, Delete) operations.

Front-end Framework: Utilize React Js to build the user-facing part of the application, including entering booking room, status of the booking, and user interfaces for the admin dashboard. For making better UI we have also used some libraries like material UI and bootstrap.

Version Control: Use Git for version control, enabling collaboration and tracking changes throughout the development process. Platforms like GitHub or Bitbucket can host your repository. Git: Download and installation instructions can be found at: <https://git-scm.com/downloads>

Development Environment: Choose a code editor or Integrated Development Environment (IDE) that suits your preferences, such as Visual Studio Code, Sublime Text, or WebStorm.

- **Visual Studio Code:** Download from <https://code.visualstudio.com/download>

Install Dependencies:

- Navigate into the cloned repository directory: cd freelancer-app-MERN
- Install the required dependencies by running the following commands:

```
cd client  
npm  
install ..  
cd server  
npm  
install
```

Start the Development Server:

- To start the development server, execute the following command:
npm start
- This app will be accessible at <http://localhost:3000>

You have successfully installed and set up the SB application on your local machine. You can now proceed with further customization, development, and testing as needed.

Roles and Responsibility:

Freelancer Responsibilities:

- Project Submission: Freelancers are responsible for submitting completed and high-quality work for the assigned projects through the platform.
- Compliance: Ensure that the submitted work adheres to client requirements, industry standards, and any specific guidelines outlined by the platform.
- Effective Communication: Actively engage in communication with clients, promptly responding to messages, asking clarifying questions, and providing updates on the project progress.
- Time Management: Manage time effectively to meet project deadlines and deliver work in a timely manner.
- Professionalism: Conduct oneself professionally by maintaining a respectful and cooperative attitude with clients and fellow freelancers.
- Quality Assurance: Deliver work that is accurate, well-executed, and free from errors to maintain client satisfaction.

Client Responsibilities:

- Clear Project Description: Provide a detailed and comprehensive project description, including deliverables, desired outcomes, and any specific requirements.

- Timely Communication: Respond promptly to freelancer inquiries, providing necessary information and feedback in a timely manner.
- Payment Obligations: Fulfill the agreed-upon payment terms promptly and fairly upon satisfactory completion of the project.
- Feedback and Evaluation: Provide constructive feedback and evaluate the freelancer's performance, helping them improve and providing valuable insights.

Admin Responsibilities:

- Data Oversight: As an admin, one of your key responsibilities is to monitor and ensure the integrity and security of all data on the platform.
- Policy Enforcement: Admins play a crucial role in enforcing platform policies, guidelines, and ethical standards.
- Conflict Resolution: In the event of disputes or issues within the community, it is the admin's responsibility to address them promptly and impartially.
- User Support and Communication: Admins should provide support and guidance to users on the platform.
- Platform Maintenance and Improvement: Admins are responsible for the overall maintenance and improvement of the research platform.

PROJECT FLOW:-

Before starting to work on this project, let's see the demo.

Demo link:-

https://drive.google.com/file/d/18-gnCVAZdojBhl7QM0_yShH1JL5A6v32/view?usp=drive_link

Use the code in:-

https://drive.google.com/drive/folders/1gSc8RWmM7yqdvYh525n5DoLjZxS_N-F4

or follow the videos below for better understanding.

Milestone 1: Project Setup and Configuration:

1. Install required tools and software:

- Node.js.
- MongoDB.
- Create-react-app.

2. Create project folders and files:

- Client folders.
- Server folders.

3. Install Packages:

Frontend npm Packages

- Node
- React
- Bootstrap.

Backend npm Packages

- Express.
- Mongoose. • Body-parser • Cors.

Milestone 2: Backend Development:

• Setup express server

1. Create index.js file in the server (backend folder).
2. Create a .env file and define port number to access it globally.
3. Configure the server by adding cors, body-parser.

• User Authentication:

- Create routes and middleware for user registration, login, and logout.
- Set up authentication middleware to protect routes that require user authentication.

• Define API Routes:

- Create separate route files for different API functionalities such as users orders, and authentication.
- Define the necessary routes for listing products, handling user registration and login, managing orders, etc.
- Implement route handlers using Express.js to handle requests and interact with the database.

• Implement Data Models:

- Define Mongoose schemas for the different data entities like products, users, and orders.
- Create corresponding Mongoose models to interact with the MongoDB database.
- Implement CRUD operations (Create, Read, Update, Delete) for each model to perform database operations.

• User Authentication:

- Create routes and middleware for user registration, login, and logout.
- Set up authentication middleware to protect routes that require user authentication.

• Error Handling:

- Implement error handling middleware to catch and handle any errors that occur during the API requests.
- Return appropriate error responses with relevant error messages and HTTP status codes.

Milestone 3: Database:

1. Configure MongoDB:

- Install Mongoose.
- Create database connection. • Create Schemas & Models.

2. Connect database to backend:

Now, make sure the database is connected before performing any of the actions through the backend. The connection code looks similar to the one provided below.

```
const mongoose = require("mongoose");

const db= 'mongodb://127.0.0.1:27017/grocery' //  
Connect to MongoDB using the connection string

mongoose.connect(db, {  
  useNewUrlParser: true,  
  useUnifiedTopology: true,  
}).then(() =>  
{  
   console.log('Connection  
successful');  
}).catch((e) => { console.log('No  
connection: ${e}');});
```

3. Configure Schema:

Firstly, configure the Schemas for MongoDB database, to store the data in such pattern. Use the data from the ER diagrams to create the schemas.

The schemas are looks like for the Application.

```
import mongoose, { Schema, mongo } from "mongoose";

const userSchema =  
  mongoose.Schema({ username: { type:  
    String, require: true  
  },  
  email: { type:  
    String,  
    require: true,  
    unique: true  
  },  
  password: { type:  
    String, require:  
    true  
  },  
  usertype:{ type:  
    String, require:  
    true  
  } }) const freelancerSchema =  
  mongoose.Schema({
```

```

userId: String,
skills: { type:
  Array, default:
  []
},
description: { type:
  String, default:
  ""}
},
currentProjects:
  { type: Array,
  default: []
},
completedProjects:
  { type: Array,
  default: []
},
applications:
  { type:
  Array,
  default: []
},
funds: { type:
  Number,
  default: 0
}, })

const projectSchema =
mongoose.Schema({ clientId: String,
clientName: String, clientEmail: String,
title: String,
description: String,
budget: Number,
skills: Array, bids:
Array, bidAmounts:
Array, postedDate:
String, status: { type:
String, default:
"Available"
}, freelancerId: String,
freelancerName: String,
deadline: String,
submission: { type:
Boolean, default: false
},
submissionAccepted:
  { type: Boolean,
  default: false
},
projectLink: { type:
  String, default:
  ""}
},
manulaLink:
  { type:
  String,
  default: ""
},
submissionDescription:
  { type: String, default:
  ""}
}

```

```

}, }) const applicationSchema =
mongoose.Schema({
  projectId: String, clientId:
  String, clientName:
  String, clientEmail:
  String, freelancerId:
  String, freelancerName:
  String, freelancerEmail:
  String, freelancerSkills:
  Array,
  title: String, description:
  String, budget: Number,
  requiredSkills: Array,
  proposal: String, bidAmount:
  Number, estimatedTime:
  Number,
  status: { type: String,
    default: "Pending"
  }
})

const chatSchema = mongoose.Schema({
  _id: { type:
  String,
  require: true
},
  messages: { type:
  Array
}
})

export const User = mongoose.model('users', userSchema);
export const Freelancer = mongoose.model('freelancer', freelancerSchema); export
const Project = mongoose.model('projects', projectSchema);
export const Application = mongoose.model('applications', applicationSchema); export
const Chat = mongoose.model('chats', chatSchema);

```

Milestone 4: Frontend Development:

1. Setup React Application:

- Create React application.
- Configure Routing.
- Install required libraries.

2. Design UI components:

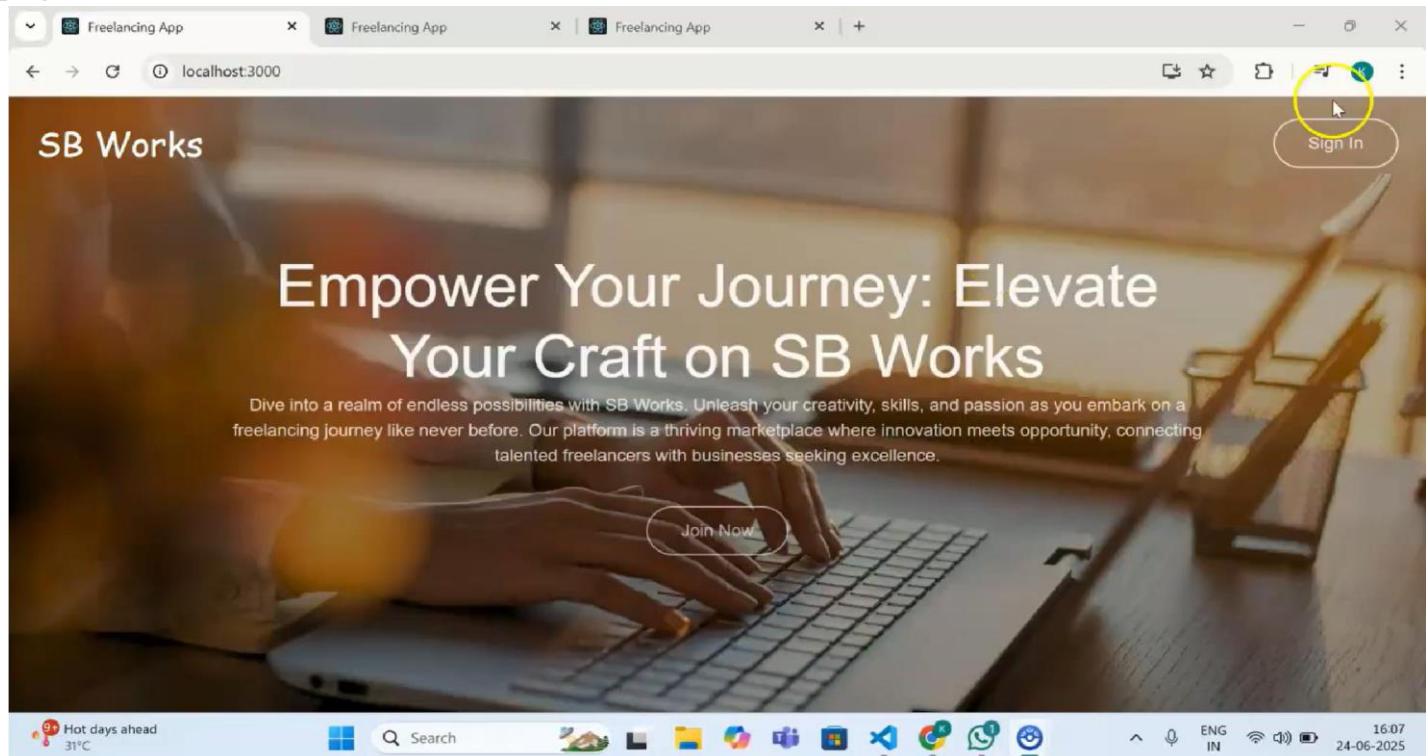

- Create Components.
- Implement layout and styling.
- Add navigation.

3. Implement frontend logic:

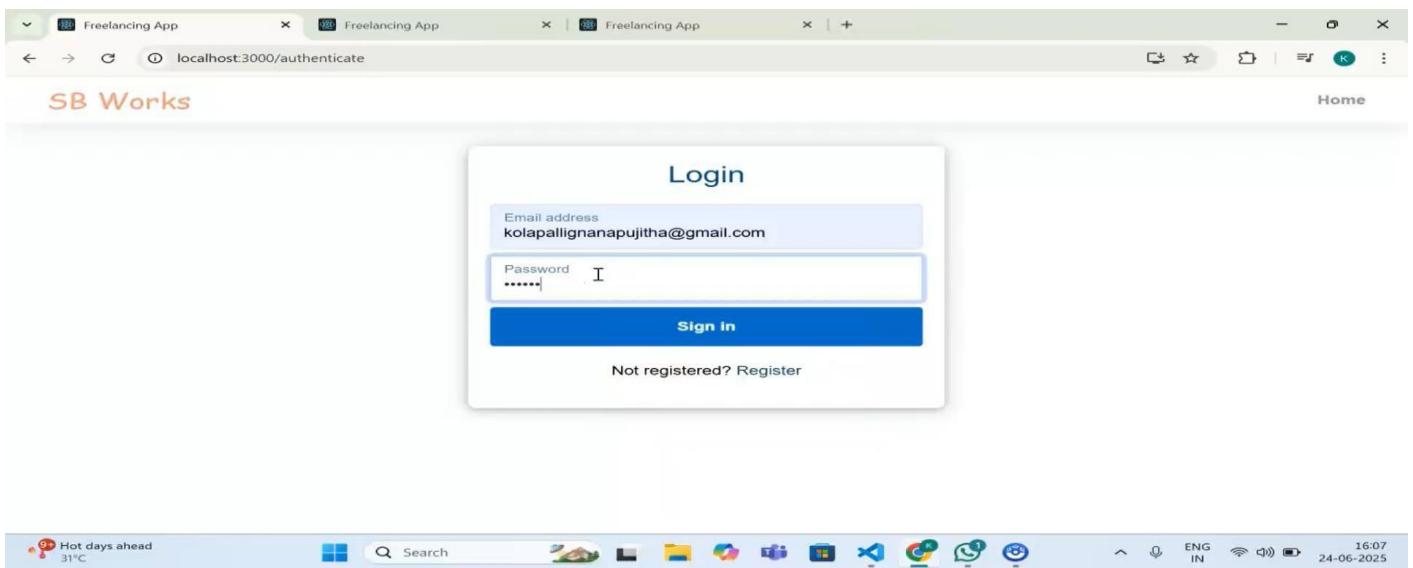

- Integration with API endpoints.
- Implement data binding.

Milestone 5: Project Implementation:

Finally, after finishing coding the projects we run the whole project to test it's working process and look for bugs. Now, let's have a final look at the working of our Darshan Ease. **Landing page:-**

Login Page:-

Client page:

The screenshot shows a web browser window with three tabs, all titled "Freelancing App". The URL in the address bar is "localhost:3000/client". The main content area is titled "SB Works" and displays a section titled "My projects". It lists two projects:

- Effective Food Waste Reduction Strategies for Restaurant and Function Halls**
Budget - ₹ 6500
• Technical Framework: Developed a responsive web application using HTML, CSS, PHP, and MySQL to streamline food donation from restaurants and function halls.
• Social Impact: Created a platform connecting food donors with NGOs to facilitate timely food redistribution and reduce wastage.
• Awareness and Engagement: Integrated educational content to inform stakeholders about food waste impacts and best donation practices.
• Outcome: Enabled efficient food recovery and delivery to the needy, promoting community welfare and environmental sustainability.
- Enhancing crop productivity through Natural fertilizers**
Budget - ₹ 6000
• Technical Framework: Developed a responsive website using HTML, CSS, PHP, and MySQL to promote sustainable agriculture practices.
• Farmer Empowerment: Developed a user-friendly platform detailing types, uses, and benefits of organic fertilizers to help farmers enhance crop health and soil fertility.
• Farmer Empowerment: Designed a multilingual (English and Telugu) platform providing clear, accessible information for farmers.
• Impact: Helped rural farmers adopt eco-friendly practices by offering reliable, easy-to-understand resources.

The browser's status bar at the bottom shows weather information ("Hot days ahead 31°C"), system icons, and the date/time ("24-06-2025 16:07").

Freelancer page:

The screenshot shows a web browser window with three tabs, all titled "Freelancing App". The URL in the address bar is "localhost:3000/freelancer". The main content area is titled "SB Works" and displays the following information:

Current projects	Completed projects	Applications	Funds
16	2	3	Available: ₹ 12500

My Skills
Python, html, css, javascript, reactjs, php, node.js

Description
I'm pujitha - a Full-Stack Web Developer with 5+ years of experience building responsive, user-friendly web applications

Update

The browser's status bar at the bottom shows weather information ("31°C Mostly cloudy"), system icons, and the date/time ("24-06-2025 16:10").

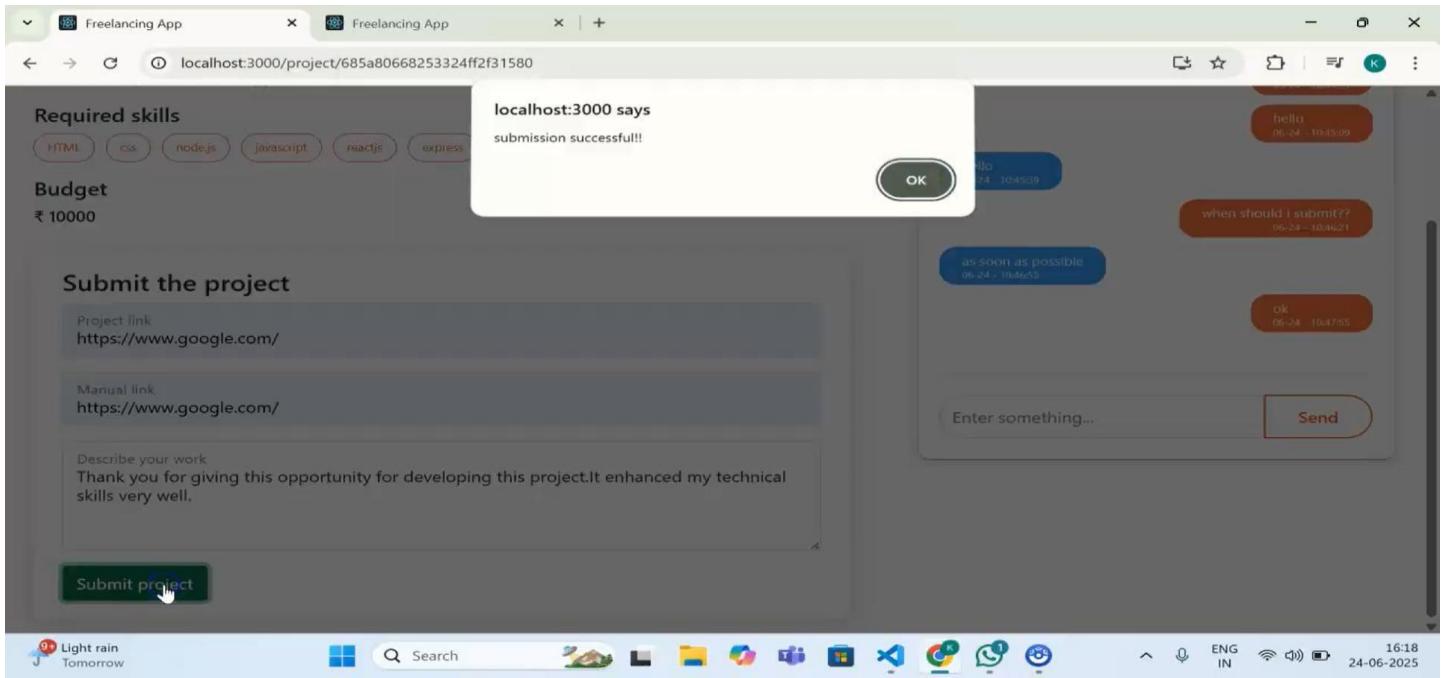

Admin page:

The screenshot shows the Admin Dashboard of a Freelancing App. At the top, there are four main sections: 'All Projects' (4 items, 'View projects' button), 'Completed projects' (3 items, 'View projects' button), 'Applications' (4 items, 'View Applications' button), and 'Users' (3 items, 'View Users' button). Below these sections is a large, empty area with a blue circular cursor icon in the center.

Chat between client and freelancer:

The screenshot shows the Client Project Details page for a project ID of 685a80668253324ff2f31580. The page includes a 'Real-Time Chat Application (RCA)' section, 'Required skills' (HTML, CSS, node.js, javascript, reactjs, express), 'Budget' (₹ 10000), and a 'Submission' section stating 'No submissions yet!!'. On the right, there is a 'Chat with the Freelancer' window showing a conversation between the client and the freelancer. The client sends 'hello' at 10:44:13 and 10:45:09. The freelancer responds with 'when should i submit??' at 10:46:23. The client replies 'as soon as possible' and a 'Send' button is visible.

Submission of project by Freelancer:

Conclusion:

FreelanceFinder empowers individuals to take control of their professional journey, one project at a time. By offering an intelligent, secure, and user-friendly platform, we aim to unlock the true potential of freelance work and connect talent with global opportunities.

For any further doubts or help, please consider the code in the drive link given below,

https://drive.google.com/file/d/18-gnCVAZdojBhl7QM0_yShH1JL5A6v32/view?usp=drive_link

The demo of the app is available at:

https://drive.google.com/drive/folders/1gSc8RWmM7yqdvYh525n5DoLjZxS_N-F4

** Happy Coding **
